1.0 Introduction

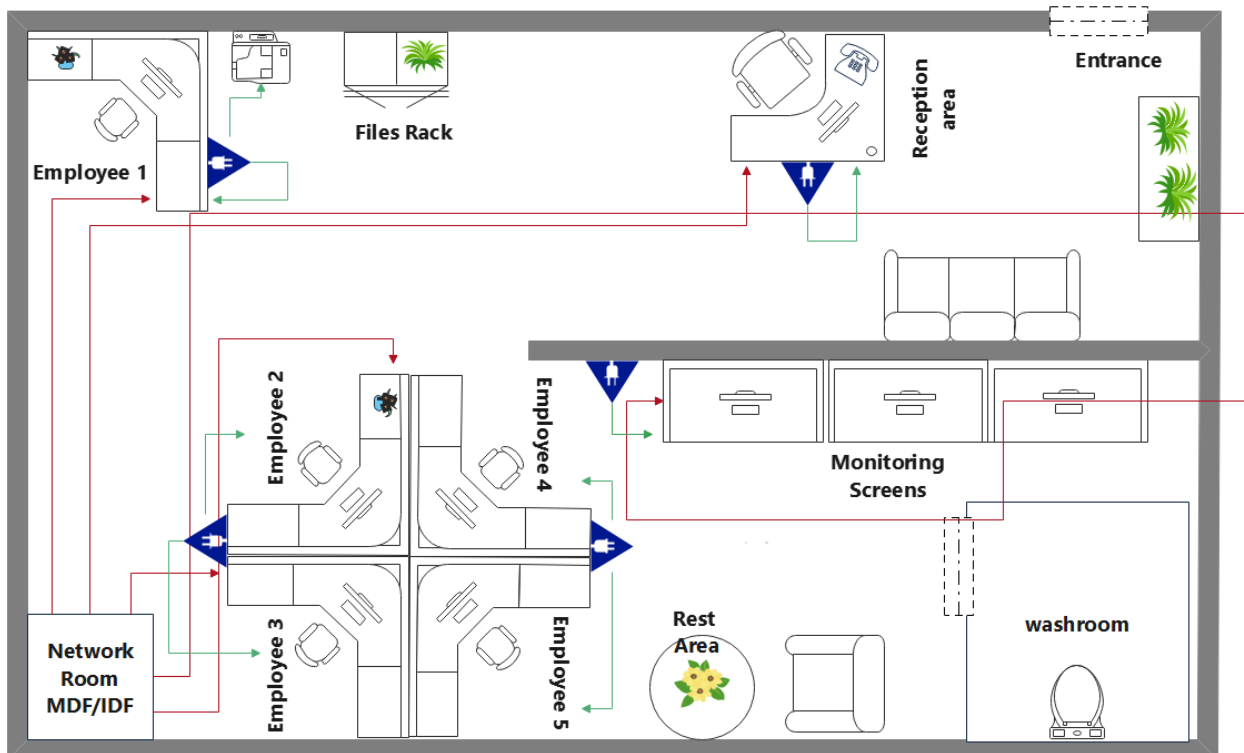

SkyNixa is an IT-based service company with 1 year of experience in the field of providing all kinds of IT and network services. We specialise in IT support services like website management, help desk assistance, and backup services, and also security solutions such as endpoint protection using third-party tools, network installations & management, and continuous monitoring. Our team is small but efficient, with 5 employees operating from a single-floor office. Within our team, 2 employees handle help-desk support, 2 others focus on security and network management, and 1 is responsible for the research and development, where everyone supports one another in all tasks.

Key operations include:

- The first is a law office, where we provide all our IT services, which include system monitoring, endpoint security, network management, and some general technical assistance to make their operations smooth and secure.
- The second client is a jewellery shop, where we mainly manage their website services and also their backups to keep their data secure and available for all kinds of their online operations.
- Our mission is to help businesses to stay secure and totally productive.
- Despite of our small size, our team always focus to deliver professional and responsive services, enthusiastic in building strong relationships with our clients and supporting their growth as well.

2.0 Floor Plan and Wiring Diagram for SkyNixa

In SkyNixa, we have a Network Room with the MDF and IDF, where all the systems (Desktops, Monitors) are connected to the network room to receive the required support, and we added some plug boards for regular connection purposes.

3.0 Software and Hardware Requirements for SkyNixa

For SkyNixa Company, we are using equipment (Both Hardware and Software) like

3.1 Hardware Requirements

1. Firewall:

As SkyNixa is a security-focused company, using a strong firewall is necessary, so we are using FortiGate 90G, and this device acts as both a firewall and router.

Product Specifications:

- 8 * Gigabit Ethernet Ports
- Web filtering
- SSL VPN support
- Version: FortiGate 90G

2. Switch (Connecting):

In SkyNixa, we use Cisco Catalyst 220X for connecting all internal devices, including desktops, servers, printers, and also access points.

Product Specifications:

- Version: WS-C220X-24TS-L
- 24 Gigabit Ethernet ports
- VLAN support
- QoS Support

3. Access Point:

To run our working space smoothly and fast, we have two Ubiquiti Unifi 6 Lite wi-fi supports, which provide wireless connectivity across the office.

Product Specifications:

- Version: U6-Lite
- WPA3 encryption
- PoE powered

4. Server:

Since SkyNixa provides IT and security services, we have one Dell PowerEdge T160 physical server to manage all our internal services related to networks and also maintain our company data securely.

Product Specifications:

- Intel® Pentium® G7400 3.7G, 2C/4T, 6M Cache, No Turbo, HT (46W) DDR5
- 16GB RAM
- 2TB HD SATA

5. Employee Systems & Monitoring Screens:

In SkyNixa, we are a total of 5 employees, and we are providing each one with a desktop and a Dell laptop in case of any remote work and for any client visits and in SkyNixa, we have 8 monitors for employees and monitoring dashboards.

Product Specifications:

- Dell Pro Slim Desktop (Model: QCS1250, Intel Core i7, 16GB RAM)
- Dell Pro 16 Laptop (Model: PC16250, Intel Core i5, 16GB RAM)
- Dell 32 Plus 4K Monitor (Model: S3225QS, 4K UHD 3840 x 2160)

6. Office Hardware:

We have a telephone for client communication or in case of any enquiries, and a printer for internal use.

Product Specifications:

- HP LaserJet Pro Printer (Model: LaserJet Pro M404dn, Monochrome laser)
- Dell Telephone (Model: Cisco 8841 IP Phone, HD Voice)

7. Power Backup:

We have an APC Smart-UPS power backup system in case of any power outage, which helps us to prevent data loss from the systems and also helps us to keep the systems on track.

Product Specifications:

- Version: SMT 1500C
- 1500VA Capacity

3.2 Software Requirements

1. Server OS:

To manage our physical server, we installed Windows Server software to manage all internal activities and authentication inside the company.

Product Specifications:

- Version: Windows Server 2022
- Active Directory Domain Services
- Built-in Windows Defender

2. Desktop OS:

To keep all employee systems safe and secure, we installed software that allows users to securely access the company data while protecting data and systems from cyber threats.

Product Specifications:

- Version: Windows 11 Pro 64-bit
- TPM 2.0 security
- Windows Defender antivirus

3. Productivity Software:

Since SkyNixa works for IT services, for proper documentation and communication, we are using MS Word, Excel, PowerPoint, etc., and for that, we are using Microsoft 365 Business Premium.

4. Backup:

As our company mainly provides backup for our clients to protect their data in case of any system failures or from cyber-attacks, we are using Veeam Backup (Version:v12) to store and secure their data.

5. End-Point Security:

We also have a Bitdefender GravityZone antivirus software for every system in our company, and we also ensure that our clients also implement the same in order to protect our desktops, laptops and servers from malware and phishing attacks.

6. Ticketing System:

In SkyNixa, we use the Zoho Desk Ticketing system to manage customer issues efficiently, maintain service records and help our staff to track issues.

7. Remote Monitoring Tool:

To monitor and manage remote client issues, we use Atera as a monitoring tool, which helps to understand the client's problem in real time and to provide them with efficient solutions quickly.

4.0 BACKUP AND DATA PROTECTION POLICY

Responsible Executive: Vaishnavi Peddireddy

Responsible Office: SkyNixa IT Services

Date Issued: 10/12/2025

Date Last Revised: 03/09/2026

Version: 1.0

Contacts

For any questions and doubts regarding this policy, contact our SkyNixa IT services security team.

Introduction

SkyNixa is always committed to maintaining the confidentiality, integrity, and availability of its systems and data. This policy provides how we manage all sensitive data for a law office and customer data for a jewellery shop with proper backup protection.

Statement of policy

All backup and data-related issues must be reported to the SkyNixa security team, and it must be handled according to the procedures outlined in this policy. Incidents including unauthorized access to the legal documents, website data, or misuse of any of the data.

Purpose

The purpose of this policy to provide a structured approach for how to provide data backups from a data loss and how to protect client data from unauthorised access. This policy aims tp protect customer data, operational continuity, and business reputation.

Guidelines

- All clients, data and every system's data must be backed up daily and full back up should be performed weekly.
- All data that is already stored must be encrypted.
- A backup copy of all data must be stored in a secure cloud storage.
- Mainly, access to the backed-up data and confidential data must be restricted to authorised people and security staff only.
- In case of any data loss or backup failure, it must be reported immediately to security team.

Exclusions

This policy does not cover any physical security breaches like theft, damage to the store or equipment. This policy focuses on backup, data protection, and preventing data from unauthorised access.

Access control

All clients, data must be accessed by the authorized SkyNixa security and network team members. All access rights and policies must be reviewed every six months and must change accordingly.

Enforcement

Employees must follow this policy, in case of non-compliance may result in disciplinary action, including suspension or termination.

Definitions

Term	Definition
Encryption	The Process of converting information or data into a code
Backup	A copy of the computer data was taken and stored elsewhere for future use.

5.0 DISASTER RECOVERY PLAN

1. Purpose

The main purpose of the Disaster Recovery plan to make sure that the Sparkle jewellery shop will be able

to recover its systems and website data and maintain its business operations quickly after a disaster. A disaster recovery plan always helps in order to reduce the financial loss and also keeps the customer information safe and secure.

2. Scope

This Disaster Recovery plan applies to all clients necessary IT systems, databases, website Information which includes entire infrastructure and payment systems information, and backup systems.

3. Risk Assessment

Identifying potential disasters that could impact the business is always necessary in order to take conduct required precautions. Risks may include:

- Cyberattacks like Ransomware and malware attacks from hackers
- Server crash
- In case of website hosting failure
- Power/Internet outage
- Data theft
- Natural Disasters like floods, hurricanes, earthquakes
- Man-made disasters like fires, theft

4. Impact on Business

In case of any disaster, if the company's systems become unavailable, which make most significant impact on the company's business, resulting in customers will not be able to place their orders and also payment failures which along reduces the sales revenue. Mainly company can lose their customers and their trust in case of any data theft.

5. Recovery Objectives

- **Recovery Time Objective (RTO):** All systems in the company has to be restored and recovered within 24 hours of incident.
- **Recovery Point Objective (RPO):** The company can only tolerate a maximum of 12 hours of data loss to work with their clients without informing them.

6. Backup Strategy

Every system in the company need to perform daily backups of the data in the business website to the database in order to protect the customers data from any cyberattacks. And at least one backup copy must be stored in cloud storage in secure location which helps from physical thefts, also all files with customers information must be encrypted with limited access to the authorized access.

7. Disaster Recovery Procedures

These are the following steps that need to follow by all the employees and officials when a disaster occurs.

Step 1: Identify the Incident

Firstly, the occurred incident needs to be identified and make sure to measure the impact of the incident in order to take necessary steps.

Step 2: Measures

Identify the affected system and ensure to disconnect the affected computer with other systems which helps to prevention of spreading if it is a cyberattack. Install fire alarms, and security cameras all over the store to protect the physical assets in case of a physical attack .

Step 3: Activate Recovery Plan

Always inform to the managers to activate necessary Disaster Recovery Plan and must inform to the IT support at first.

Step 4: Restore and Test Systems

After doing necessary research recover all database form latest secure backup and should verify the functionality of all the systems.

Step 5: Resume Operations

After doing all the recovery and necessary research bring systems back online and should monitor the performance regularly

8. CommunicationPlan

Ensure that the company should always have ready communication plan in first place to inform employees, customers, stakeholders in case of any emergency. Communication plan should always include other methods such as social media, email, and phone.

9. Testing & Review

After any cyber incident disaster recovery plan must be tested annually and all backup data must be tested monthly and all the policies must be review regularly, and all unnecessary polices must be removed accordingly.

10. Plan Approval

Version	Author	Date	Changes
v 0.1.0	Vaishnavi Peddireddy	03.01.25	First draft
v 0.2.0	Vaishnavi Peddireddy	06.25.25	Changes in policy
v 1.0.0	Vaishnavi Peddireddy	01.02.26	Removed Unnecessary policies

6.0 SkyNixa Security Tools

SkyNixa always works with data and backups to maintain it more safe and secure, the company needs some strong security tools. As SkyNixa is a small startup, we need more security tools like easy to manage, cost-effective, and strong to work with real-world threats.

6.1 Firewalls

The following are the three commercially available firewalls that easily accommodate small to medium businesses. Each one is explained with its unique features and its application.^{[1][2][3]}

Firewall	Key Points	Advantages	Disadvantages
Fortinet Fortigate 90G	Delivers converged networking and security, unparalleled performance, AI/ML services	Strong Security with better performance	Higher cost when compared with other series, and advanced features requires subscription
Cisco Firepower 1000 series	Business resiliency, ease of use and enabled with advanced use cases and threat function	Strong IPS engine and best for security	Higher cost for small startups and licensing/management can be a lot more
Network PA-400 series	Strong policy-based control with high security and ML powered strong threat prevention	Strong security and with appealing visibility	Maintaining all hardware and software subscription are more for small business

Table 1 - Firewall

- Fortinet FortiGate 90G is chosen for SkyNixa which comes with the best cost and speed and also provides all the necessary security features also VPN for our remote client works includes malware protection and web filtering. And mainly it fits well for a single-floored office setup by providing all its services.

6.2 IDS (Intrusion Detection System)/IPS (Intrusion Prevention System)

IDS/IP works for the Detection of any suspicious traffic in the network and can block it from the source. While choosing IDS/IPS, we usually need something simple and easy to manage. The following are the IDS Systems.^{[4][5][6]}

IDS/IPS	Type	Advantages	Disadvantages
Cisco Firepower NGIPS	Used for inline or passive deployments and IPS with deep inspection and ecosystem	Speed time of detection, real-time visibility, DNS-based security intelligence	Complex for small teams
Fortinet FortiGate IPS	More capability on FortiGate appliances, and simple deployment	FortiGate IPS is advanced, best IPS performance, automated updates	IPS inside the FortiGate Platform
Palo Alto Networks	Strong context with user applications with advanced prevention	Providing multiple layers of prevention, detect and block threats on all ports	Limited set of predefined ports, higher cost

Table 1 – IDS/IPS

- SkyNixa choose Fortinet FortiGate IPS, as a small company managing a separate tool for IDS/IPS is a bit hard so using FortiGate IPS and firewall keeps everything in a place and also this reduces the overall setup time and day-to-day works with providing full protection.

⁶https://www.paloaltonetworks.com/apps/pan/public/downloadResource?pagePath=/content/pan/en_US/resources/datasheets/threat-prevention-datasheet

6.3 Endpoint Protection

Endpoint Protection is always necessary for all the systems in SkyNixa to protect from the malware, ransomware.^{[7][8][9]}

EPR Solutions	Key Points	Advantages	Disadvantages
Bitdefender GravityZone	Simple to use and best for small enterprises	Strong protection with EDR features and easy to access	Need subscriptions to access some features
Sophos Intercept	Easy to maintain and cloud management	Strong centralized management, ransomware exploit	Need licensing choices for all of features
CrowdStrike Falcon	AI-powered indicators of attack, script control and high-performance	Very strong in detection, strong threat intel and response	Higher cost for the basic features as well

Table 2 – Endpoint Protection

- SkyNixa is mainly deals with data backups and security tools and Microsoft Defender for business is very much useful for small businesses like SkyNixa to maintain all the data in one place with providing with all necessary tools.

⁷https://www.bitdefender.com/content/dam/bitdefender/business/products/xdr/Bitdefender-GravityZone-XDR-Datasheet_en.pdf

⁸<https://ca.insight.com/content/dam/insight-web/Canada/Partners/sophos/Sophos-Intercept-X-Advanced-Datasheet.pdf>

⁹<https://www.crowdstrike.com/en-us/resources/data-sheets/falcon-prevent/>

7.0 Endpoint Protection and Mobile device Management

To improve the security for the clients, SkyNixa always preferred to use strong MDM (Mobile Device Management). MDM is necessary for SkyNixa to control all the devices and improve security policies and maintain updated software and protect data in case of any lost.^{[10][11][12]}

7.1 Endpoint Protection

Name	Vendor	Best For	Key Points	Advantages	Disadvantages
Bitdefender GravityZone	Bitdefender	Its best and suitable for small and medium businesses	It provides strong anti-malware, web protection, device control and firewall protection	The best advantage is light weight and east to manage	The disadvantage for advanced features we required subscription
Microsoft Defender	Microsoft	Its good for businesses which initially uses Microsoft 365	It has next-generation antivirus, strong endpoint detection	It has the strong integration with windows and Microsoft 365	The only thing is it works best within Microsoft ecosystem
Sophos Intercept X	Sophos	Its best for businesses who needs strong ransomware protection	It comes with the deep learning malware detection and with exploit prevention	The only advantage is very strong ransomware protection	Works for ransomware and higher cost when we need advanced features

Table 4 – Endpoint Protection

7.2 Mobile Device Management

Name	Vendor	Best For	Key Points	Advantages	Disadvantages
Microsoft Intune	Microsoft	Supports mainly Windows, macOS, iOS, Android	It provides main features like Device management, compliance policies, app deployment	It mainly provides strong integration with Microsoft 365	It works great with microsoft ecosystem
Workspace ONE UEM	OmniSSA (VMWare)	Devices like Windows, macOS, iOS, Android	It has unified endpoint, management, automation	It has strong device management	It is more complex for small companies

IBM MaaS360	IBM	Windows, macOS, iOS, Android	Mainly provides mobile device security, and policy management	Its mainly for strong compliance and security policies	It is less integration with microsoft tools
------------------------	-----	------------------------------	---	--	---

Table 5 – Mobile Device Management

- SkyNixa choose Microsoft Intune because it suitable well with the company's current size and environment. As SkyNixa already using Microsoft services and Windows devices, so Microsoft Intune suits perfectly with the company.
- The main reason for choosing Microsoft Intune works with Windows 11 where all the systems in SkyNixa are windows and also integrated with Microsoft 365 and also it allows full device encryption and mainly helps with the password integrity and policies updates.
- Because of these advantages we are choosing Microsoft Intune is most suitable solution for SkyNixa.

8.0 User And Group Access Control

In any company maintaining data security is always important and in order to do that company usually follows principle of least privilege, which means all the employees can only access to the resources which are required to perform their job responsibilities.

In SkyNixa, also to manage user access securely, we use Windows Server 2022 Active Directory to create user accounts and groups. This helps the employees to manage the permissions and the resources and making the system easier to access.

8.1 User Groups in SkyNixa

To implement the policies, we need separate the users as the groups based on the job responsibilities and each group should be assigned with the permissions which are necessary for job duties.

Group	Role	Job Responsibilities
IT Support	Network and system administration	Staff are responsible for the server management and network configuration and for the system maintenance
Security Team	Security and monitoring staff	Taking care of security logs and responsible for monitoring systems and endpoint protection
RND Team	Research and development	Works on testing tools, security research, and security improvements
Help Desk	IT support staff	Helps with the client issues, support tickets, helps in troubleshooting any other problems

Table 6 – User Groups

8.2 Shared Folder Access

In SkyNixa, we have several shared folders on the company server to store all the required company details, all the security logs, all the data backups, and other resources to access to the folders should always restricted according to the job roles.

Folder	Purpose	Groups Allowed	Permission
Company Documents	It stores all the company internal documents and admin reports	Employees	Read
Company Documents	All administrative files	Admin	Full Control

Helpdesk Tickets	Where we store all the customer support tickets and client issue reports	Helpdesk	Read/Write
Security Logs	Contains system monitoring logs and security alerts and all end point security	Security Team	Read
Research	R&D team materials and research materials	RND Team	Read/Write
Backup	All clients data which is already backup	Security Team, IT admin	Full Control

Table 7– Shared Folder Access

8.3 Permissions Assigned to Groups

Group	Read	Write	Modify	Full Control
IT Admin	Yes	Yes	Yes	Yes
Helpdesk	Yes	Yes	Yes	No
Security Team	Yes	No	No	No
RND Team	Yes	Yes	No	No
Employees	Yes	No	No	No

Table 8 – Permissions Assigned to Groups

8.4 Audit Policies

Event	Description	Action
Login Attempts	Records all the failed login attempts	Reviewed by security team
Access File	Tracks access to all the sensitive folders such as backups and logs	Monitoring
Permission Changes	Need to record all the changes made to permissions	Reviewed by the IT members
Backup Access	We need to track all the backup files	Security team need to review after getting the alerts

Table 9 – Audit Policies

9.0 Review of Cybercrimes

SkyNixa, take of care the sensitive data and also manages the clients data, which very important. As Skynixa works with IT services, and client data which is main reason for the cybercrimes. Cybercrimes are increasing every year which make the IT companies in the higher risk.

9.1 Possible Cyber Attacks

- 1) **Ransomware Attacks:** It may affect the company's internal server and the clients data for the backup systems and client websites and databases. In case of any ransomware attack happen, the company may lose access to all the important data.^[15]
- 2) **Phishing Attacks:** The attack can be through the fake Microsoft 365 login pages which is used by SkyNixa, through fake system updates notifications and fake client email requesting access. In SkyNixa if an employee accidentally provides login credentials, attackers may gain all access to company system and the clients data.^[16]
- 3) **Data Breaches:** As SkyNixa, manages services for jewellery shop and law office where we store all the sensitive information, where we have all the legal documents and customer information and also payment details as well, if the attackers access this data, it could lead to financial loss, legal issues, and damage for the company's reputation.^[17]
- 4) **Malware Attacks:** As, SkyNixa, deals one of clients which is jewellery shop where they use website for shopping all the payment details and customer details in the website may be in risk and also because of this malware attack system slowdown or even crash.^[18]

¹⁸<https://www.esentire.com/cybersecurity-fundamentals-defined/glossary/cybersecurity-ventures-report-on-cybercrime>

10.0 Automation Scripts

Since SKyNixa, handles multiple systems, automation using scripts helps reduce manual human work, and helps us to save some time, and improves security.

- **Backup Automation:** In SkyNixa, we will automatically backup client and company data using our Veeam Backup. And these backups are like daily incremental backups and weekly full backups. This helps us from data loss and ensures quick recovery during failures.
- **Log File Rotation:** This manages all the server logs automatically to make sure system clean and safe and it should be done daily or when logs reach a certain size which helps us o save storage space and also makes the system performance stable.
- **System Monitoring Scripts:** These scripts take care of Monitor server health, CPU usage, disk space, and also network activity using Atera and it will run every 5 to 10 mins. And helps in detecting issues early and avoid downtime as well.
- **Antivirus & Security Updates:** Bitdefender antivirus Makes the runs automatically and also scan all the runs and these runs need to be done daily and full scan on weekly bases and these helps us to protect our systems from the malware attacks and cyber threats.
- **User Account Management:** Here scripts automates user creation, password reset, and disabling inactive accounts in windows server. We run these scripts daily or sometimes incase when we need them, these runs improves security and reduce manual admin work.
- **Patch Management:** These scripts do the work of automatic installation of OS and any other updates on all systems and it need weekly updates and emergency patches as needed makes system secure and up to date.
- **Network Monitoring Scripts:** Network is the main important thing, the purpose of the scripts is to check firewall and switch and network connectivity status this script need to run for every 5 minutes which ensure network availability and fast issue detection.
- **Ticketing System:** As SkyNixa, deals with the local clients we automatically assign the tickets in Zoho Desk based on issue type and time It runs in real time and improves times and customer support efficiency.
- **Email Alerts & Notifications:** This will send all alerts for failure, downtime, or security issues and it should run for real time triggers and always feel handy helps the team respond quickly to problems.

11.0 Security Assessment Schedule

As SkyNixa, handles sensitive data, it is very important to perform regular security assessments throughout the year.

Activity	Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
Antivirus Scan	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Log File Analysis	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Vulnerability Scanning	✓		✓		✓		✓		✓		✓	
Patch Management	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Backup Testing	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
Access Control Review	✓					✓						✓
Penetration Testing			✓						✓			
BCP Tabletop Exercise				✓				✓				
DRP Testing					✓					✓		
Security Policy Review	✓					✓						✓

Table 10 – Security Assessment Schedule
